

Analysis of potential

For a period of about 3 weeks students do various activities to find out more about their abilities and potential.

The schedule is as follows:

Time	Activity	Remarks
3 days	tests of all kinds of skills, social as well as manual	at school
one afternoon	presentation of first results to students	at school
two lessons	the different fields for the practical experience are presented to the students	the students choose 5 fields from a number of around 10 offered
10 days	Practical experience in five different areas of work (IT, economics, gardening, electronic and mechanic technique, painting, hotel and restaurant business...) for always 2 days	in companies, voc. Schools...
2 after- noons	individual feedback for students and parents (about 30min)	at school by instructors from outside

The whole activity is carried out by an agency from outside the school and is attended by the teachers who are responsible for the students' career guidance in the two years to come. We try to implement this activity two years before the students graduate and leave the school. Parents are involved in this action from the very beginning and it is considered as a start of the career planning process.

The photos show students during the practical experience.

Here a girl is testing her skills as a waitress.

This is a group of students testing their abilities in the IT business for 2 days.

Two days in a kitchen with a professional chef.
