

## Analysis of potential – Test of skills

In the course of a two day workshop the students have the opportunity to test a large variety of skills. Usually they start with manual abilities like bending wires copying a given pattern. The evaluator (normally a couple of the teachers and career counsellors specially trained as evaluators in these tests but it is quite easy to do if you have got the

original/master samples) then checks how exact the students managed to work. In the same way the students saw wood and draw patterns. In the photos some of our parter's students are trained and told how to do it.
